

11/26 Elevator Pitch Practice

12/3, 12/10 (rewriting your elevator pitch to the final report)

12/17 First submission of the Final Report

12/24 Final submission of the Final Report

Biomedical AI 5-min Elevator Pitch (why give me \$\$)

1. Restate the research question in one sentence

"We will develop [specific model type] to [concrete measurable goal] that advances this question by [unique capability]"

2. Technical Approach & Innovation (Convince me the selected model make sense)

- **Architecture choice justification:** Why this specific model family fits the your problem (*some one else has already done X, we added Y so we can do Z*)
- **Data flow:** Input modalities → processing → interpretable outputs

3. Data Reality Check (Convince me the data is there)

- **Source & scale:** Specific datasets, timeframes (public? Reasonably gather from NTU with $N=?$ per year)
- **Label strategy:** How you'll get ground truth, (M annotators with N cases, overall hours and spending?)
- **Known challenges:** Data bias, time effects, class imbalance—how would you fix it?

4. Validation That Matters (Convince me you know how to validate your model)

- **Primary endpoints:** 2-3 metrics directly tied to the research question (diagnosis / segmentation accuracy? How would this linked to the clinical problem)
- **Validation pathway:** Internal / External / Prospective

5. Risk Mitigation & Resources (Convince me it's still feasible if things go side ways)

- **Top 2 failure modes** and your contingency plans
- **Go/no-go milestones:** Clear checkpoints at 3, 6, 12 months
